About me

After +10 years as a developer, I find that new challenges and leading varied projects to success are what most motivates me, and I enjoy using my postgraduate training in geophysics to develop clean and efficient solutions to complex issues. Teamwork and a growth-friendly environment are key to me.

In my spare time, I cultivate my mentoring & communication skills by tutoring developers from around the world, and I strive to become a multitasking ninja by working as a freelancer and open-source contributor on several platforms. Sometimes I share my programming delusions by writing blog posts.

Besides programming, my passions include football, playing the guitar, and preparing for my next marathon.
